L2 Acquisition and Creole Genesis-Claire Lefebvre 2006-01-01 In this volume, second language (L2) acquisition researchers and creolists engage in a dialogue, focusing on processes at work in L2 acquisition and creole genesis. The volume opens with an overview of the relationship between L2 acquisition and pidgins/creoles (Siegel). The first group of papers addresses current language contact at a societal or an individual level (Smith; Terrill and Dunn; Bruhn de Garavito and Atoche; Liceras et al.; Muller). The second section focuses on processes characterizing various stages of L2 acquisition and creole genesis: relexification and

transfer from the L1 and their role in the initial state (Sprouse; Schwartz; Kouwenberg; Aboh; Ionin). Chapters in the third section discuss processes involved in developing grammars, namely, reanalysis and restructuring (Sanchez; Brousseau and Nikiema; Steele and Brousseau). The final section concentrates on fossilization and the end state (Cornips and Hulk; Montrul; Lardiere). Between them, the chapters cover lexical, morphological, phonological, semantic and syntactic properties of interlanguage grammars and creole grammars.

**Diagnostics for
Experimental
Thermonuclear Fusion
Reactors 2**

Peter E. Stott
1998-04-30 This book of proceedings collects the papers presented at the workshop on "Diagnostics for Experimental Fusion Reactors" held at Villa Monastero, Varenna (Italy) September 4-12, 1997. This workshop was the seventh organized by the International School of Plasma Physics "Piero Caldirola" on the topic of plasma diagnostics and the second devoted to the diagnostic studies for the International Thermonuclear Experimental Reactor (ITER). The proceedings of the first workshop on ITER diagnostics were published by Plenum Press in 1996 with the title "Diagnostics for Experimental Thermonuclear Fusion Reactors". While many of the ideas and studies reported in the first workshop remain

valid, there has been substantial progress in the design and specification of many diagnostics for ITER. This motivated a second workshop on this topic and the publication of a new book of proceedings. ITER is a joint venture between Europe, Japan, Russia and USA in the field of controlled thermonuclear fusion research. The present aim of ITER is to design an experimental fusion reactor that can demonstrate ignition and sustained burn in a magnetically confined plasma. To achieve this goal, a wide range of plasma parameters will have to be measured reliably. It is also anticipated that diagnostics will be used much more extensively as input to control systems on ITER than on present fusion devices and this will require increased reliability and long-term stability.
